Summary

Full-stack software developer with a B.S. in Mathematics and Computer Science and hands-on experience building React/Next.js applications backed by APIs, SQL databases, cloud storage, CMS workflows, and real-time features. Strong foundation in algorithms, data modeling, SQL, applied data analysis, and modern backend systems.

Work Experience

Vistora Tech - Full-Stack Developer Intern

June 2025 to November 2025

- Developed healthcare dashboard features using React, Tailwind CSS, Node.js, and Express for healthcare providers and third-party administrators.
- Built backend CRUD operations and connected client-side dashboard workflows to database-backed API endpoints, supporting create, read, update, and delete actions across administrative records.
- Integrated Google Cloud Platform file-storage workflows for uploading and managing documents from the application interface. • Engineered reusable React components for data-heavy interfaces, including searchable, filterable, paginated tables for appeals, settings, and administrative screens.
- Converted Figma wireframes into production-ready components while standardizing shared UI patterns, hooks, and Tailwind conventions across the codebase.

LASC Soccer Club Website - Web Developer

July 2025 to August 2025

- Architected and deployed the club's official website with Next.js and Tailwind CSS, creating a responsive platform for events, teams, announcements, and news.
- Set up and configured Strapi CMS so non-technical staff could manage content without direct code changes.
- Helped configure Cloudinary image storage and media workflows for staff, player, team, and announcement assets. • Implemented modular staff cards, team sections, announcement bulletins, and dynamic news pages backed by CMS-managed content.
- Collaborated directly with club leadership to define requirements and ship a community-facing platform used by 100+ members.

Projects

Trilogy Portal - Production Full-Stack Client Portal

Client-facing project | Next.js, React, Supabase, PostgreSQL, Tailwind CSS

- Built and deployed a production portal used with real clients to manage 50+ active players, centralizing player records, program workflows, and operational visibility.
- Designed PostgreSQL/Supabase-backed data models for players, client records, and portal workflows, applying SQL fundamentals for filtering, querying, and future reporting.
- Implemented authenticated user flows and role-aware access patterns so client-facing data could be managed through secure dashboard interfaces.
- Built reusable dashboard components and service-layer patterns that connect polished UI workflows to persistent relational data.

Gridlock - Real-Time Socket API Project

Personal Project | Node.js, Express, Socket.io, JavaScript

- Built a real-time API layer with Socket.io to support live application state, bidirectional client-server events, and low-latency updates.
- Structured server-side event handlers and API logic around predictable request/response flows, improving maintainability for real-time features.
- Used the project to deepen backend fundamentals around event-driven architecture, API design, and state synchronization between multiple connected clients.

Education and Certifications

University of California San Diego - B.S. Mathematics and Computer Science

Relevant courses: Data Structures, Algorithms, Computability Theory, Probability, Optimization, Machine Learning, Numerical Linear Algebra

AWS Certified Cloud Practitioner - CLF-C02 exam passed, 2025

College of the Canyons - Associate degree, IGETC and Mathematics

Relevant courses: Algorithms, Data Structures, C, C++, Discrete Structures

Skills

Languages: JavaScript, TypeScript, Python, SQL, C, C++

Frontend: React, Next.js, Vite, Tailwind CSS, shadcn/ui, responsive UI systems, accessibility, SEO

Backend and Data: Node.js, Express, REST APIs, Supabase, PostgreSQL, MongoDB, Firebase, SQL schema design, authentication, row-level security fundamentals

Real-Time, Cloud, and DevOps: Socket.io, Redis fundamentals, BullMQ fundamentals, Docker fundamentals, AWS S3, EC2, CloudFront, RDS, DynamoDB, Google Cloud Platform, Cloudinary, Vercel

Frameworks, Data Analysis, and Tools: Next.js, NestJS fundamentals, Pandas, NumPy, scikit-learn, PyTorch, Git/GitHub, Postman, Excel/Sheets, Figma, Terraform fundamentals
